

Pond repair kit has everything you need to quickly and easily make a permanent repair.

- ◆ Suitable for all types of liner.
- ◆ Comprehensive instructions included.
- ◆ Can also fix small cracks in plastic preformed ponds.
- ◆ Sufficient for multiple repairs.
- ◆ Adhesive is versatile, strong and marine safe.

Locate the hole in your pond liner.

Scrub the liner clean with a scouring pad and hot soapy water.

Dry with a clean cloth.

Cut out a patch of a suitable size. Ensure edges are rounded to reduce the chance of them peeling up.

To ensure a high quality long lasting repair. Wipe liner and the patch with a clean cloth dabbed with a solvent such as White Spirits or Petrol.

Apply a generous amount of sealant to the patch.

Place the patch over the hole and it push down firmly and evenly.

The sealant will spread out around the edge of the patch.

Smooth the sealant down to make a neat professional looking finish.

If possible leave the repair to dry for 24hr before refilling the pond.
